

MagnitudeTM

Unleash your stallion's breeding potential

Thank you for your recent purchase of Magnitude®.

Magnitude® is a patented blend of marine-based omega-3 fatty acids, specifically DHA. Our field research has shown that gradually increasing the feeding amount using a step-up feeding program results in successful consumption of the product.

Magnitude® comes with an enclosed scoop. The scoop may be used for both acclimation and breeding season maintenance. Each 20# bucket of Magnitude® provides enough product for one stallion on the full feeding level for 26 days.

SUGGESTED FEEDING GUIDELINES:

- Acclimation Period:

We suggest feeding ¼ scoop twice a day, gradually working up to the full feeding level (1 level scoop twice a day) over a period 3-4 days. It is important to thoroughly mix Magnitude® into the grain portion of the diet.

- Working Season Maintenance:

Once stallions are acclimated to Magnitude®, feed them one level scoop twice a day. This provides the recommended daily amount of 0.75# product/day.
